[quote](#) [report](#)

### KMSpico.v9.0.6.20131120.stable

- full automatic
- portable
- OFFLINE

Updated 12/02/2013: checked with latest m\$ updates from 11/12/2013

the incredible KMSpico.v9 by heldigard activates full automatic:

- Windows 8(.1) Professional
- Windows 8(.1) Enterprise
- Windows Server 2012 (R2) all versions
- Windows 7 Professional
- Windows 7 Enterprise
- Windows Server 2008 R2 all versions
- Windows Vista Business
- Windows Vista Enterprise
- Windows Server 2008 all versions
- Office 2013 / Project / Visio
- Office 2010 / Project / Visio

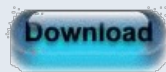

*all other editions of win 8(.1) / 7 / vista / office are NOT supported by this tool.  
windows eval/preview versions are also NOT supported.*

**just run "KMSpico.exe" and wait about 10 - 60 seconds...**

KMSpico.exe activates the products for 180 days like an original KMS server does.  
at anytime you can always extend to 180 days again by rerunning KMSpico.exe.  
no harm if you miss the 180 days - just reactivate.  
it also converts full automatic an installed office to VL version - if necessary.

already activated products (activated other than by KMS) won't be touched.

on win8.1 there is a "Tap" adapter needed for activation.  
the adapter gets installed/removed automatic.  
for a silent run use **KMSpico.exe /silent**

1 mb .rar

**password: 4all**

**Code:**

**Select all**

<http://www.sendspace.com/file/4hubqz>

(uncheck "Use our download manager..." if offered!)

**Code:**

**Select all**

<http://www.datafilehost.com/d/e179e748>

(uncheck "Use our download manager..." and click small download-button!)

**many av programs report false positive! my release is clean / genuine source by heldigard**

## howto add WMC to 8.1 PRO

**Code:**

**Select all**

<http://pastebin.com/6MixqN5U>

**since i have to reupload *often* (see edits) i wouldn't mind a "thanks" 😊**

if you have problems with this tool, run "Check\_Log.cmd" which displays the logfile.  
post the logfile here if you don't understand it.

if you already have used any "100% working windows 8(.1) permanent activator" 😬 your windows might be screwed up and KMSpico wouldn't work. in these cases reinstall from an unmodified source or try (as elevated command)  
**sfc /scannow**

if problem persists on windows 7 / vista systems try this also:  
run Daz's loader (link below)  
click "Uninstall" and restart

## for a safe and permanent activation of other versions of Windows 7 / Vista

use Daz's loader (unfortunately NOT working on UEFI/GPT systems):

**Code:**

**Select all**

<http://forums.mydigitallife.info/threads/24901-Windows-Loader-Current-release-information>

you can easily "Anytime Upgrade" your windows 7 to any desired version (except enterprise):  
just choose a key from Daz's loader's "keys.ini". only the version is important, not the company.  
**this "Anytime Upgrade" works with ANY preinstalled (OEM) windows 7 version!**  
**also on UEFI/GPT systems because no loader is needed for that!**  
**just use a key to upgrade, that's it! keeps activated! works for sure!!! 😊😊😊**

thx to heldigard, CODYQX4, mikmik38, slave77, Josh Cell, rrohela and many others @ mdl 🇩🇪)

## Microsoft Office Pro Plus 2013 (x86/x64)

***real mint 10 minute download***

1. download desired \*.img (thx to LostED!)
2. rename \*.img to \*.iso
3. burn, mount or unpack \*.iso
4. install
5. **to convert and activate just run KMSpico.exe**
6. you can make all updates!

enjoy 😊

there is also a server version available,  
...

(moved content to post #1)

as i explained in post #1: it is a complete windows pc running in a virtual machine!  
only therefore it can act really "genuine"

slim it more down if you can... 😊
